

KEYSTONE 133ELITE UNIT

Bigger. Better. Faster. The forward-thinking design of the Keystone 133Elite® combines great looks with increased efficiency. In addition to conventional textures, Keystone's Sculpterra™ Technology can produce units with specially-designed natural textures.

The Keystone 133Elite is perfect for large wall applications. Its 8" x 24" face dimension creates a larger-scale look, aesthetically matching the larger wall look and feel, while reducing the number of units required to complete the job. Never before have wall designers had so much flexibility in creating the perfect appearance for their Keystone wall. In addition to conventional textures, Keystone's Sculpterra™ technology can produce units with specially designed natural textures – in combination with the wide variety of colors available in most Keystone products. The Keystone 133Elite satisfies a wide array of design requirements from corners to sweeping curves, offering simply the best combination of strength, beauty, and efficiency on the market.
